Dependence in probability, analysis and number theory: The mathematical work of Walter Philipp (1936–2006) <i>István Berkes and Herold Dehling</i>	1
The law of the iterated logarithm for $\sum c_k f(n_k x)$ <i>Christoph Aistleitner</i>	21
Lacunary sequences and permutations <i>Christoph Aistleitner, István Berkes and Robert Tichy</i>	35
Weyl’s theorem in the measure theory of numbers <i>Roger C. Baker, Ryan Coatney and Glyn Harman</i>	51
A three-dimensional signed small ball inequality <i>Dmitriy Bilyk, Michael T. Lacey, Ioannis Parissis and Armen Vagharshakyan</i>	73
On the dependence coefficients associated with three mixing conditions for random fields <i>Richard C. Bradley</i>	89
The discrete minimal energy problem and sequences modulo one <i>Johann S. Brauchart</i>	123
On Vervaat processes for sums and renewals in weakly dependent cases <i>Endre Csáki, Miklós Csörgő and Rafal Kulik</i>	145
On the almost sure invariance principle for stationary sequences of Hilbert-valued random variables <i>Jérôme Dedecker and Florence Merlevède</i>	157
Law of the iterated logarithm for U-statistics of weakly dependent observations <i>Herold Dehling and Martin Wendler</i>	177
The almost sure version of Cramér’s theorem <i>Manfred Denker and Mark M. Fridline</i>	195

Variance estimation with applications	
<i>Paul Doukhan, Jérémie Jakubowicz and José Rafael León</i>	203
A central limit theorem and a metric discrepancy result for sequences with bounded gaps	
<i>Katusi Fukuyama</i>	233
A new limit theorem for the continued fraction expansion	
<i>Marius Iosifescu</i>	247
Managing local dependencies in limit theorems for sums of weakly dependent sequences	
<i>Adam Jakubowski</i>	253
Zeros of a two-parameter random walk	
<i>Davar Khoshnevisan and Pál Révész</i>	265
Time constant for the once-oriented last passage site percolation in high dimensions	
<i>Gregory J. Morrow</i>	279
Conditional central limit theorem via martingale approximation	
<i>Magda Peligrad</i>	295
Stationary processes and a one-sided representation in terms of independent identically distributed random variables	
<i>Murray Rosenblatt</i>	311
An example of non-quenched convergence in the conditional central limit theorem for partial sums of a linear process	
<i>Dalibor Volný and Michael Woodroffe</i>	317
Dirichlet polynomials: some old and recent results, and their interplay in number theory	
<i>Michel Weber</i>	323
